why choose dc+b

- + Established in 1967 - A company you can trust
- + Family owned + operated Australian business
- + Affordable + value for money
- + We do it all so no hidden costs - Our experienced team design, measure, manufacture + install
- + Free design, measure + quote
- + The largest network of stores in Australia making it more convenient for you to visit our team at your local dc+b store
- + Australia's largest range of samples + full sized displays so you can be confident you're making the right decision
- + Peace of mind with our three year warranty
- + Exceptional quality which provides long term value + increases your property's appreciation
- + Market leading materials, manufacturing processes, advanced technology + quality control systems
- + Authentic 100% custom made handcrafting without any pre-fabrication or shortcuts
- + Australian Business Quality Award Winner
- + Best of Houzz Service Award Winner

why choose dc+b automation

Our Automate range is the ultimate choice for modern day living. With the touch of a button your window coverings glide open or close, + stop exactly where you like. Eliminating the need for cords + chains, opting for motorised indoor + outdoor window coverings provides a seamless look throughout your home combined with a safer environment for children + pets.

Allowing you complete freedom you can control your window coverings from anywhere in your house. Control one window covering individually or all of your window coverings as a group at the one time, from a single control.

We have automated options that operate through home automation systems + can be integrated within building management systems - control your blinds, lighting, heating + cooling all within the one control.

Automation is the way of the future + our exclusive + innovative systems now make it more affordable than ever before.

automate by dc+b

- + Indoor + outdoor window coverings
- + Ultimate choice for child + pet safety
- + Clean, modern look with no cords
- + Easy to operate
- + Operate heavy window coverings with ease
- + Suitable for difficult to reach windows

AUTOMATE™
BY DOLLAR CURTAINS + BLINDS

creating an automated + sustainable sanctuary

Our Automate window coverings add more to a home than just convenience, they facilitate advanced control of your indoor climate – be it natural heat or natural light. Regardless of how sophisticated your window glazing, or tint may be, they're rarely a match for mother nature's dynamic tendencies. Wild weather shifts, from strong sun rays, to cold overcasts, usually invite excessive use of air-conditioning, heating + lighting.

Although it may be second nature to reach for the thermostat + reverse undesired temperature spikes, it can prove to be detrimental to yearly energy expenses, as well negatively contributing to current global climate health. Similarly, switching the lights on in your home is traditionally more convenient than manually raising blinds or opening drapes. Unfortunately, this too has a negative impact on your home, your wallet + our planet.

Traditional methods of light + heat control remain necessary for home comfort, however we're on a mission to help reduce the impact of these traditional methods. Our Automate window covering systems add a new dimension of control + convenience that can help you break out of conventional + costly habits.

Research has found that uncovered windows are responsible for up to a 40% loss of heating energy, while conversely also contributing up to 87% of a home's heat gain,¹ depending on external weather conditions. Mitigating such high amounts of energy transfer through windows can be as simple as raising or lowering your shades at optimal times.

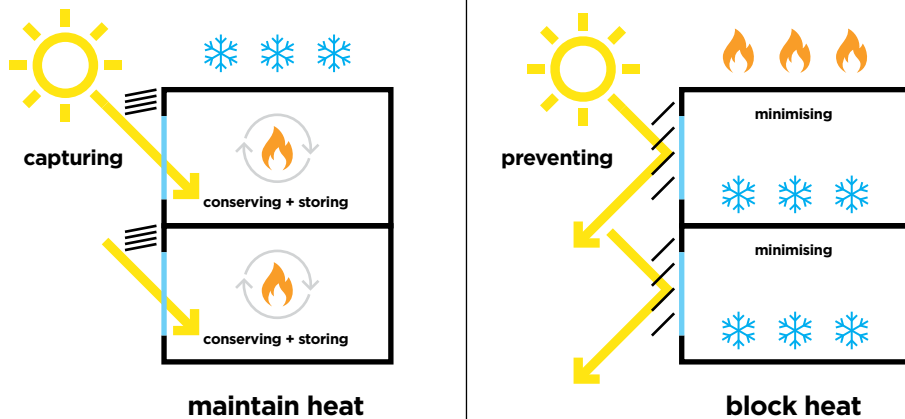

Motorised window coverings seamlessly integrate into modern-day living + propose a safer, more elegant + efficient solution to their manually operated counterparts. Effortlessly manage your shades with dynamic control options, from remotes to sun-sensitive sensors.

References:

1. <https://www.yourhome.gov.au/passive-design/glazing>

capture heat in winter + release it in summer

A dynamic window covering system can cover your windows in times of intense heat, creating a comfortable, shaded sanctuary. Just as easily, raising all the window coverings in a home to absorb as much sun light as possible, can significantly reduce the amount of internal heating that is needed during the cooler months. For everyday in between, your window coverings can endlessly move at the click of a button, or less, to a height best suited to combat the ever-changing outside environment.

It can be difficult to manage manual blinds in most homes, but even more so in commercial buildings. The excessive number of windows present + needed in large structures can quickly become overwhelmingly difficult to manage effectively. With our Automate range + the Pulse 2 Hub, commercial buildings + businesses can benefit from a centralised point of control for managing natural light + heat.

Additionally, schedules + triggers move shades throughout the day based on the sun's position, creating the perfect climate for customers + employees as well as significantly impacting the time, effort + energy needed to otherwise create a comfortable space.

automating a better future

The world's need for energy efficient solutions continues to heighten + we're committed to help accelerate the movement to a better connected, secured + emission-free home. A sustainable future that doesn't fall short of the luxuries we've come to expect, but one that enhances our level of comfort, without damaging the world around us.

smarter systems to optimize our internal environments

By creating unique, dynamic modes that seamlessly raise or lower your window coverings throughout the day, your home's natural climate regulates dependent on outside temperature, time or the sun's location. Automate's smart triggers, schedules, timers + sensors, ensure your shades move to optimize your home's energy efficiency. A modern home is a connected home + with our automation, your window coverings quickly familiarise themselves into any existing IoT eco system. Your window coverings effortlessly adjust themselves if your connected devices sense a shift in temperature, light or your location. 8-15% of the average Australian household's electricity budget can be consumed by lighting (or about 6% of its entire energy use).²

References:

2. <https://www.yourhome.gov.au/energy>

By relying less on a light switch + more on ideal shade positions, your electricity bill can be greatly affected.

Automate motors can determine where your window covering should be positioned based on the solar exposure, using a sun sensor, + smart sunrise + sunset detection. When not in direct exposure, Automate window coverings can be programmed to shift to different positions, using our hub + app control, that ensure your brightest days are sun fuelled.

at home or away

If you have multiple locations like a home, office, or vacation home, simply switch between them for independent control. Always be in charge of your privacy + security. Enjoy your time away from home without having to stress about your window coverings, our exclusive app control allows you to remotely access your window coverings, know their position + operate them as you would if you were home.

morning + evening

Automatically raise or lower your Automate window coverings according to the position of the sun with our Pulse 2 Hub. Set a 'Morning' scene + watch all your shades promptly rise when you start your day, or create an 'Evening' scene that will dynamically alter based on the sunset in your location.

control options

Pulse 2 Hub

Our Pulse 2 Hub allows you to accurately control your window coverings via an intuitive animated interface in our app on your smartphone or tablet.

Using our app, easily personalise the daily routine of your window coverings; organising them by room, grouping them by scenes + automating them with timers. Unlock the convenience of smart shade operation.

Our Pulse 2 Hub connects to home networks to unlock the luxury of automated window covering control, using voice control via Apple HomeKit + Siri, Amazon Alexa, Google Assistant, IFTTT or SmartThings.

With built-in Wi-Fi or the option of a LAN connection, our Pulse 2 Hub quickly connects to the home's network to unlock the luxury of automated window covering control.

When opting for app control using your smart phone or tablet, or voice control using your own preferred smart device, our Pulse 2 Hub is required. Once we have finished installation, + a remote is setup + programmed for you by our installers, you can then proceed to setup the Pulse 2 Hub to connect to your own devices.

When opting to control your window coverings solely with our Push 15 remote, our Pulse 2 Hub is not required.

VOICE CONTROL

Intuitively control Automate shades with simple voice commands through Google Assistant, Amazon Alexa or Apple HomeKit.

DC+B APP CONTROL

Control shades remotely, whether home or away. The dc+b control app is available for all Android phones, tablets + iOS devices, including Apple watches + iPads.

SUNRISE + SUNSET DETECTION

Utilising time zone and location, the Pulse can automatically raise or lower Automate shades according to the position of the sun.

LIVE FEEDBACK

ARC enables live communication between the hub + motors. Check motor battery levels + shade positions through the app or smart assistants.

DISTINCT DESIGN

The Pulse embraces elements from modern architecture to ensure it complements the interior of any home.

PERSONALISED EXPERIENCE

Create custom rooms, scenes, routines + timers to enable efficient or automatic shade control based on time, weather or schedule.

HIGH-SPEED CONNECTION

Built-in Wi-Fi or the option of Ethernet connection, ensures the Pulse can connect to any home network + provide swift, wireless control of Automate shades.

MULTIPLE USERS

Share your hub with multiple users. Each user can create their own profile + a list of their favourite devices + scenes.

How do I set-up the Pulse 2 Hub in my home?

Pulse 2 Hub is a wireless controller for all motorised window coverings in your home with a range of up to 30 metres. For an average sized 4 bedroom single-level home we suggest a 2 Hub set-up for uninterrupted coverage. If you have a second story it is recommended to install an additional Hub on this floor to ensure a consistent signal is sent to all your motorised window coverings.

AUTOMATE PULSE 2 HUB

Input Voltage	5V	Account per Hub	5
Wi-Fi network	2.4Ghz only	Locations per Hub	5
Range	30m (98ft)	Devices per Hub	30
Connection	Ethernet + Wifi	Hubs per Location	5
IOT	Apple Homekit, Amazon Alexa, Google Assistant, FTTT, SmartThings	Rooms per Location	30
3rd Party Device Integration	Control4, ELAN, HomeSeer, Crestron AMX, Savant	Scenes per Location	20
Apple IOS Version	Needs to be 10 or greater	Timers per Location	20
Android Version	Needs to be 6.0 or greater	Length	112mm
Devices	Compatible with Smart Phones, Tablets + Smart Watches	Width	112mm
Hub Offline	<p>No Internet or Wifi If your Hub is disconnected from the Internet and the Wifi Router, all timers that are programmed will continue to operate.</p> <p>No Internet but local Wifi If your internet service goes down and the hub is still connected to the Wifi Router, the following functions will still operate – Timer Activation, Activate a Single Device, Operate a Scene, Operate a Room, Shade position Feedback, Shade Battery Feedback, Adjust Limits</p>		
		Height	30mm

Live animated feedback

ARC enables live communication between the hub and motors. Check motor battery levels and shade positions through the app or smart assistants.

smart phone + tablet app control

Our dc+b control app is complimentary to download + enables sophisticated window covering control straight from any iOS or Android smart phone or tablet.

Once our Pulse 2 Hub has been installed, download our exclusive dc+b control app + set up an account. Experience window covering control straight from your smart device. It's that simple.

Utilise our app to group window coverings by room or scene, establish custom schedules + set timers for convenient + efficient window covering control.

app updates

Our dc+b control app is ever evolving with new features + improvements, which you can benefit from years after we've installed your window coverings.

VARIETY OF ROOM SETTINGS

Group automate shades by room + conveniently control them accordingly.

HUGE RANGE OF SCENES + TIMERS

Personalise shade control + organise how your shades operate by specific daily events or scenes automatically at the optimal time.

MULTIPLE SHADE TYPES

Roller blinds, curtains, outdoor blinds, awnings... control every shade type from one screen.

SCENE CAPTURE

Do you have all your shades in the perfect positions + wonder how to capture this scene quickly? The new 'capture a scene' function allows for all shades, just as you have them, to be recorded as a new scene which you can then use as part of your daily routine.

PAUSE ALL TIMERS

School holidays kicked in? Or just something other than your standard routine? Pause all your pre-set daily timers with one easy action, so your morning routine allows for that extra sleep in when you need it.

COLOUR CODED STATUS INDICATORS

Each shade screen now features battery + signal strength icons, represented by red, amber, or green colouring to signify excellent strength/full battery vs low strength/charge required.

voice control

Utilising voice commands, operating our Automate controlled window coverings is now more convenient than ever. We've partnered with all of the latest smart home assistants to deliver the most convenient window covering control options. Intuitively operate your Automate window coverings with simple voice commands through Apple HomeKit + Siri, Amazon Alexa, Google Assistant, IFTTT or SmartThings. The “native” control responds to the user’s naturally spoken language for window covering operation.

compatible voice assistants

Simply set up our Pulse 2 Hub with your preferred devices to easily control your smart window coverings with your voice via Siri, Alexa or Google Assistant.

“Hey Siri,
Open my shades...”

APPLE HOMEKIT

Automate motorisation is designed for compatibility with Apple HomeKit. Simply set up the Automate Pulse 2 Hub + our dc+b control app then instructs Siri to control your smart window coverings, with your voice, via a variety of Apple devices.

AMAZON ALEXA

To control your motorised window coverings via Amazon Alexa, establish your Automate shade set-up with the Automate Pulse 2 Hub, dc+b control App + Alexa App. Link the Alexa Skill + begin using your voice for window covering control.

GOOGLE HOME

With your Automate smart window coverings + Pulse 2 Hub - set up, manage + control your motorised window coverings from the Google Home + dc+b control App. Utilise the Google Assistant to naturally control your window coverings with your voice.

push 15 remote

Cutting edge design, our Push 15 remotes feature tactile push button controls + are compatible with our Automate range of motors using ARC technology. Available with 15 channels, the wireless Push 15 controllers come with group controls + the ability to hide unused channels.

Complimentary slimline wall mounts featuring magnetic connections ensure remotes are effortlessly housed when not in use, allowing the flexibility to use your remote as a hand-held or wall-mount remote.

Our Push 15 remotes are the foundation of your Automate motorisation system, + a remote is always required for you to use as a base or backup control for your automated window coverings.*

When selecting app or voice control, a remote is required for every order along with the Pulse 2 Hub. Once we have finished installation, our installers setup + programme your remote, you can then proceed to setup the Pulse 2 Hub to connect to your own devices for app or voice control.

When opting to control your window coverings solely with our Push 15 remote, our Pulse 2 Hub is not required.

- + Has a distinct, slim design suitable for any modern interior.
- + 15 Channel group function.
- + P2 & lock programming buttons now accessible via back of remote, without cover removal.
- + A Large LCD screen displaying channel & group.
- + Option of Gloss White + Matte Black colours.

CONTEMPORARY DESIGN

Slim + stylish design with LCD display, created to perfectly suit any modern interior.

MAGNETIC MOUNT

Wall cradle included for convenient magnetic wall mounting.

GROUP CONTROLS

Seamlessly control individual motors or add multiple motors in one group.

LEVELLING PRECISION

Easily adjust your shades to your desired position using the levelling control bar on the paradigm 15 channel remote.

Please note: Somfy Motors + Photon One Solar Motors use a different remote design. Contact your local store for more information.

*As Building Management Motors are to be connected + controlled via your third party system, + setup by your electrician, a remote is not required.

ARC (Automate Radio Communication) is proprietary technology utilising 433MHz radio communication with bi-directional feedback that brings Automate motorised systems together.

building management systems

Achieve effortless control of your window coverings + seamless integration with your building management system for a feature-rich home automation solution. Easily control your window coverings in conjunction with your home's other smart devices including; lights, security, thermostats + home entertainment - to name a few - via your chosen convenient control system.

Our Automate range easily + reliably integrates with a variety of major third-party building management systems to deliver centralised control of your motorised window coverings from within each system.

For building management systems that offer home automation integration, cables are supplied so that once blinds are installed your electrician can make the connections to your system. Depending on your smart home automation partner, the Pulse 2 Hub may also be required to integrate with your system.

Building Management Motors are to be controlled via your building management system, + are therefore not compatible with our Automate remotes, app, sensors or accessories.

OUR PARTNERS FOR SMART HOME AUTOMATION INCLUDE

sensors + accessories

INDOOR SUN SENSOR

adjusting shades to the perfect level

This clever + discreet device easily mounts to the inside of your window where full sunlight is available to charge it, + can be configured to your choice of four pre-set light intensity thresholds. When sunlight levels raise above your chosen setting, our sun sensor will automatically close your blinds to help control sun glare, protect your interior from UV damage + help keep your home cool.

REPEATER

power to increase the range

If you have an instance whereby not all motors are responding or responding intermittently, our ARC repeater will double the range you currently get. The easy to use repeater increases the range up to 40m/131f with a maximum 2 repeaters per system / network, perfect for double story home or multi-level buildings. The repeater is simply placed into a USB socket or a USB charger connected to a powerpoint.

motor options

Our automation range features both battery operated wire-free, + hard-wired motors, depending on the automated window covering product type, size + installation.

BATTERY-OPERATED WIRE-FREE, RECHARGEABLE MOTORS

Cutting-edge battery technology

Automate battery-powered motors are a perfect option for existing households wishing to upgrade to motorised window coverings.

Allowing you to charge your window covering motor batteries over time, a charger is required along with access to the motor so you can recharge it. Opt for one charger to use across multiple window coverings or several chargers. We advise customers to charge once every 6 months, based on lifting + lowering twice a day.

*Retrofit capability only possible with RB08 + RB09 systems.

Our market-leading roller blind rechargeable motors include built-in lithium-ion batteries + do not require wired power or space for external battery packs. Using the 4m wall charger cable, simply plug the charger into your battery operated roller blind or curtain, + into a powerpoint.

Our solar panel charger is also available for battery operated roller blinds, it absorbs sunlight to power your blinds, so no manual charging is required. The solar panel charger is required to accompany each individual blind.

When opting for battery operated roman + cellular blinds, the wall charger can be used to power the blinds continuously through a powerpoint, or it can be used to re-charge the battery pack which then powers the blinds.

Did you know?

We have the ability to fit our roller blind battery operated 1.1 + 2.0 motors onto your existing roller blinds with our retro-fit service*

WALL CHARGER

For continuous power this charger gets connected to a power point.

BATTERY PACK

Used as a power source installed with the blind, then gets charged with the wall charger as required.

WIRED MOTORS, HARDWIRING ELECTRICITY

Market leading design

For window coverings to suit medium to large windows + large commercial projects, our wired motors are the ideal hard-wired choice. These motors get connected to power, so with a permanent power supply there is no need to re-charge.

Once your order has been placed, we supply molex cables with an instruction sheet, these are to be supplied to your preferred electrician to install the cables prior to our installation of your window coverings.

Connected to power, no need to re-charge

product options

roller blinds

Automated roller blinds will help provide a more comfortable interior + ultimately improve the energy efficiency of your home through maximising or minimising the amount of natural light filtered into your home.

smarter design with battery operated roller blinds

Our roller blind battery operated 1.1 + 2.0 motors utilise new lithium-ion battery technology that boasts a patented “wire-free” design with the antenna cable concealed within the motor head + a micro-USB port for charging.

These motors are the quietest yet, the ‘soft stop’ function slows the motor down rather than coming to a sudden stop to improve the acoustic experience, ensuring an elegant + quiet finish at the end of the blind’s movement. The speed adjustment options achieve the smoothest + quietest movement of the blind.

Additionally, they feature ‘battery check’ technology. With the press of a button the motor moves the blind down to signify the battery percentage level.

Our Automate Wire-Free Li-ion Zero motors allow for proficient installation within residential homes + small commercial projects, with no electrical wiring required + the ability to be retrofit into existing systems*.

*Retrofit capability only possible with RB08 + RB09 systems.
Features listed above don't apply to battery operated 3.0 motor.

Our market leading roller blind battery operated 3.0 motors have the ability to link and lift multiple roller blinds simultaneously.

curtains

A great deal can be achieved when motorising our curtains in lofty, open plan living areas with our range of Automate motors. Our technology allows for motorised curtains that can wrap around corners + slow down upon closure, to perfect an elegant aesthetic for your interior space.

Also, if you are closer to your curtain than your remote control or smart phone, then our curtain motor offers the added benefit of manual activation with stand-out “soft touch” technology. A gentle pull on the fabric will initiate movement + the motor will complete the action – automatically opening or closing the curtain.

Wired curtain motors offer a manual override feature which can be used if your mains power goes out.

The motors have been designed to be quiet for acoustic comfort with soft start + stop functionality, + offer the luxury of window covering automation with the suite of Automate controls.

Motors are placed behind the curtain, mounted vertically facing downwards but can also be mounted facing upwards into a bulkhead.
